

W3PLAY WHITE PAPER

P2E

THE FUTURE OF WEB3 GAMING

www.w3play.app

About Us

W3Play is the all-in-one Web3 GameHub that connects developers, gamers, and blockchain technology into a single powerful ecosystem.

Who We Are

W3Play is a next-generation Web3 GameHub that unites gamers, developers, and blockchain technology into a single immersive ecosystem. We empower users to play, earn, and truly own their in-game progress through secure smart contract systems and seamless wallet integration – redefining digital ownership and gaming rewards.

Our Mission

To revolutionize the gaming industry by offering a transparent, player-first platform where fun meets finance. Our mission is to give every gamer the ability to earn real value from their time and achievements, while equipping developers with the tools to succeed in the Web3 era. Unlike traditional gaming platforms, W3Play injects smart contracts directly into approved games, ensuring that all rewards are transparent, secure, and driven by actual gameplay.

What We Do

A GameHub that brings together players, creators, and crypto into one seamless platform. For players, it's a place to explore and enjoy Play-to-Earn games, and earn real rewards in \$W3P all through an easy to use launcher with built in wallet support. For developers, W3Play offers powerful tools, funding, and smart contract integration to help launch blockchain-enabled games without needing deep crypto knowledge.

Our Vision

To become the world's leading platform for Play-to-Earn gaming – where players truly own their progress, developers thrive with the support of a Web3-native ecosystem, and every interaction unlocks real value. W3Play envisions a future where gaming isn't just entertainment, but a sustainable, rewarding economy powered by community, transparency, and innovation. We aim to set the standard for how decentralized gaming should feel: fun, fair, and built to last.

Key Features

W3Play Launcher

A powerful and user-friendly PC launcher that brings all your Web3 games into one place. Access your game library, track rewards, connect your wallet, and explore new titles – all within a sleek, intuitive interface.

Smart Contract Integration

Every approved game is injected with custom smart contracts by the W3Play team. This enables Play-to-Earn functionality, secure reward systems, and seamless Web3 interactions without developers needing deep blockchain expertise.

Developer Prize Pool

50% of all token transaction fees go into a smart contract-driven pool that funds approved games and fuels in-game rewards. The more players engage, the more value developers and their communities receive.

The Facts

10,000,000,000

\$W3P TOKENS IN FIXED SUPPLY

3 OFFICIAL GAMES

ROADMAP

Phase 1

- Launch of the \$W3P token
- Deploy smart contract
- Early community onboarding and platform preparation

Phase 2

- W3Play GameHub Beta release
- Launch of 3 official W3Play-developed games
- Smart contracts live for integrated P2E mechanics
- First third-party developer game integration

Phase 3

- Centralized exchange listing (MEXC)
- Seed investment round begins
- Official launch of Asset World Marketplace
- NFT item and tokenized asset trading opens

Phase 4

- Targeted Binance listing
- Cross-chain compatibility rollout
- Developer grant programs go live
- GameHub feature upgrades based on community feedback

Phase 4

Phase 3

Phase 2

Phase 1

W3bMart

W3bMart is W3Play's decentralized marketplace for game-ready assets and tokenized in-game items. It empowers both developers and players by creating a secure, transparent space for digital asset creation, distribution, and trade.

For Developers

- **Access a curated library of free and premium assets – including 3D models, animations, sound effects, UI kits, and code snippets.**
- **Upload your own assets and earn \$W3P through each use or resale, protected by smart contract licensing and royalty systems.**

For Players

- **Discover tokenized in-game items (NFTs) with real value.**
- **Earn them through gameplay or purchase from other players.**
- **Every item you own is stored securely in your wallet and can be traded or used across supported games.**

Key Features

- **Peer-to-peer trading with smart contract enforcement**
- **True digital ownership of game items and assets**
- **Built-in royalty system to reward original creators**
- **Fully integrated with the W3Play launcher and wallet**

**YOU'VE READ THE VISION.
